Incorporated, Not Retired

Version 1.0, 10 September 2026. This assessment puts the Protective Security Policy Framework's own rule for what happens to a Protective Security Direction, stated in its Guidelines, against the framework's own record of one Direction, PSPF Direction 001-2024 on managing foreign ownership, control or influence risks in technology assets. It reads the Direction, its page and the department's listing, three annual releases of the framework, two lists of requirements, three editions of the Guidelines and two change summaries, each pinned by hash in this corpus. It adjudicates nothing: it does not say whether the Direction binds any entity today, and it names the one document that could say so in the framework's own terms. Every artefact it reads was pinned by an earlier case or general finding of this practice; this is the first assessment in the corpus to retrieve nothing of its own, and its register moves no other. Every quotation was tested against the pinned bytes at the passage where it sits.

The limit that bounds every sentence below. The framework names one document as its own guidance on this Direction: "PSPF Policy Explanatory Note 001-2024 (available to government personnel on GovTEAMS)" [L-PSR-12], cited twice in the Release 2025 Guidelines and twice in the Release 2026 Guidelines, and cited on the Direction's own face as "Policy Explanatory Note 01/24" [L-PSPF-1]. It is held on a government-only platform. This practice recorded it as not publicly obtainable on 19 August 2026 and does not hold it. It is the one named document that could apply the framework's rule to this Direction in terms. Every statement here that something is absent is a statement about documents this practice holds, and that document is not among them.

Scope

What is assessed. One rule and one instance. The rule is the framework's own, at section 1.2.1.4 of its Guidelines, on what happens to a Direction at annual review. The instance is Direction 001-2024, read against the three annual releases that followed it, Releases 2024, 2025 and 2026, their lists of requirements, the three editions of the Guidelines that carry the rule, the two published change summaries, the Direction's own page, the department's listing of Directions, and two instruments in force that name the Direction.

What is not assessed. Whether any entity is bound today by the Direction, by Requirement 0046, by both or by neither: the framework has not said it in terms in any document held, and this assessment does not say it for the framework. Whether the framework erred: the rule and the record are both the framework's, and the assessment reports where the second does not answer the first. What Policy Explanatory Note 001-2024 says: it is unread and unheld. Each is refused where it would otherwise be made, and again at the end.

The method. Every artefact was retrieved by this practice under its retrieval convention, each address fetched

twice within the minute and every request logged, including refusals. Four documents are held from the Wayback Machine only, as raw mementos at stated timestamps, because the publisher refused their live addresses in both forms the convention provides on 10 September 2026: PSPF Release 2024 [L-PSR-5], its List of Requirements [L-PSR-7], its Guidelines in the 4 April 2025 edition [L-PSR-9] and the Release 2025 Guidelines in the December 2025 edition [L-PSR-11]. Every count below names the test that produced it. Every statement that something is absent names the population it was searched in. Quotations from the PDFs are taken by text extraction; a table cell that wraps in extraction is quoted to the wrap and the sentence says so. Nothing is read from a register note where the pinned bytes can be read.

1 The rule

The framework's Guidelines carry, under the heading "Annual Review of Protective Security Directions", one sentence in two limbs: "Directions are reviewed annually and either" "incorporated into the following annual PSPF Release (each July) as mandatory requirements and then retired" or "retired outright" [L-PSR-12]. **The sentence is word-identical in the 2024, 2025 and 2026 editions of the Guidelines**, tested by extracting the passage from "Directions are reviewed annually" to "retired outright" from each edition, folding whitespace, and comparing the three strings [L-PSR-9, L-PSR-11, L-PSR-12]. Nothing in this assessment is imported as a test; the rule is the framework's, and the two limbs are the two tests.

The framework's releases state what a Direction is and what an entity must do with one. Release 2026, section 1.2.1: "The PSPF provides that, having considered advice from key Technical Authority Entities, the Secretary of the Department of Home Affairs may issue a Direction to Accountable Authorities to manage an unacceptable protective security risk to the Australian Government." and "Accountable Authorities of entities that are subject to the PGPA Act must adhere to any Protective Security Directions issued by the Secretary of the Department of Home Affairs." [IR-PSPF-1]. Requirement 0002, in every release read: "The Accountable Authority complies with all Protective Security Directions." [IR-PSPF-1].

2 The Direction

PSPF Direction 001-2024 is two pages, signed by the "Secretary" of the "Department of Home Affairs" and dated "July 2024" [L-PSPF-1]. Its publications page carries "Publication date" "5 July 2024" and "Last updated" "5 July 2024" [L-CCP-12b]; the department's listing of Directions carries "Publication date: 8 July 2024" [IR-PSPF-3]. **It sets one deadline and four numbered obligations.** "By PSPF Reporting Period 2024-25 (June 2025) all entities must:" [L-PSPF-1], and then: first, "In accordance with Department of Home Affairs guidance, implement a process when undertaking procurement of technology assets" "to identify and manage potential FOCI risks, calibrated to the entity's risk environment"; second, "Conduct a risk assessment of potential FOCI risks identified during the procurement of technology assets process, using the security risk assessment process detailed in PSPF Policy 3: Security Planning and Risk Management."; third, "Regularly monitor the entity's contracts relating to technology assets to ensure that FOCI risks do not materialise"; and fourth, "Report any potential or identified FOCI risks identified during procurement processes for technology assets to the Department of Home Affairs' Government Cyber and Protective

Security Branch at PSPF@homeaffairs.gov.au" [L-PSPF-1].

The Direction carries no commencement, expiry, review or revocation clause. Its two pages were read in full, 78 lines by text extraction, and the deadline quoted is the only statement of time in it. It refers a reader onward: "Further information about FOCI as it relates to procurement is detailed in Policy Explanatory Note 01/24 - Managing Foreign Ownership, Control or Influence Risk in technology assets." [L-PSPF-1]. It cites the framework's policies by a numbering the current releases do not use, "PSPF Policy 3: Security Planning and Risk Management", "PSPF Policy 5: Reporting on Security" and "PSPF Policy 6: Security Governance for Contracted Goods and Service Providers" [L-PSPF-1]; the string PSPF Policy followed by a digit occurs 0 times in the whole extracted text of Release 2026 [IR-PSPF-1].

3 Requirement 0046

Release 2026 lists the Direction as "integrated into PSPF Requirement 0046." [IR-PSPF-1]. That requirement reads, in Release 2024, Release 2025 and Release 2026: "Requirement 0046 | RISK | All entities | 31 October 2024" and "Procurement and contract decisions consider the security risks before engaging providers operating under foreign ownership, control or influence, and in response to any developments during the contract period that may give rise to foreign ownership, control or influence risks." [L-PSR-5, AT-PSPF-1, IR-PSPF-1]. **The requirement is word-identical in the three releases and dated the same in each**, tested by extracting the paragraph between its ribbon and the next heading from each release, folding whitespace, and comparing. The ribbon's date field is defined by the release as "Date requirement last updated" [IR-PSPF-1]. The requirement has not been updated since 31 October 2024, the date of Release 2024.

The framework's own 2024 mapping traces the requirement to no Direction. The Release 2024 List of Requirements carries, beside each requirement, a decision column and a column for the previous requirement it descends from. Row 46 reads "New (add)" and "N/A new control" [L-PSR-7]. The two requirements on the same list that carry the TikTok Direction read "Direction 01/2023" in those columns [L-PSR-7]. Over the list's numbered rows, 209 distinct numbers from 1 to 210 extracted by layout text with row 143 not matching the row pattern, 2 rows cite a Direction as their source and both cite Direction 01/2023; none cites Direction 001-2024. The list traces the TikTok Direction into requirements and traces Requirement 0046 to nothing.

The requirement predates the Direction's deadline by eight months. The Direction's obligations fall due "By PSPF Reporting Period 2024-25 (June 2025)" [L-PSPF-1]; the requirement is dated 31 October 2024.

4 Where the four obligations sit

The Direction's four obligations were read beside Release 2026's section 1.2.1, section 6.1.3, Requirement 0047 and Table 2, and beside section 6.1.3 of the Release 2026 Guidelines. Each obligation's nearest text is stated; none is stated as its equivalent.

The first obligation, a process, has its object in Requirement 0046 and its form nowhere in a requirement. The Direction requires a process "In accordance with Department of Home Affairs guidance" [L-PSPF-1]. Requirement 0046 requires that decisions "consider the security risks" [IR-PSPF-1]; the

guidance that follows it in section 6.1.3 says "The Department of Home Affairs has produced guidance on identifying FOCI risks in procurement." [IR-PSPF-1].

The second obligation, a risk assessment by a stated process, sits in guidance. Section 6.1.3 of Release 2026: "Robust due diligence must be undertaken when determining FOCI-related security risk." [IR-PSPF-1]. The Release 2026 Guidelines open the same section with "PSPF Requirement 0046 mandates that when making procurement and contract decisions entities consider the security risks before engaging providers operating under foreign ownership, control or influence" [L-PSR-12]. No requirement in section 6.1.3 of the release names a risk assessment of FOCI risk.

The third obligation, monitoring contracts, has its nearest requirement in 0047. "Security risks arising from contractual arrangements for the provision of goods and services are managed, reassessed and adjusted over the life of a contract." [IR-PSPF-1], and Requirement 0046's second limb, "in response to any developments during the contract period" [IR-PSPF-1].

The fourth obligation, reporting to the department, sits in a table of reportable incidents and in no requirement. Table 2 of Release 2026 lists, under significant security incidents to be reported to the Department of Home Affairs: "Potential or identified foreign ownership, control or influence risks identified during the procurement process." [IR-PSPF-1]. **That row entered the framework at Release 2025, nine months after Requirement 0046.** The phrase "identified during the procurement process" [AT-PSPF-1, IR-PSPF-1] occurs once in the whole extracted text of Release 2025 and once in Release 2026, in each case inside Table 2, and 0 times in the whole extracted text of Release 2024 [L-PSR-5]. The Release 2025 Changes Summary lists the row as a change of that release, at "Section 3.6.3": "Potential or identified foreign ownership, control or influence risks identified during the procurement process." [L-PSR-4b].

The Direction's deadline appears in no release. The Direction's phrase "By PSPF Reporting Period 2024-25 (June 2025)" [L-PSPF-1], searched as the string Reporting Period 2024-25, occurs 0 times in the whole extracted text of each of Release 2024, Release 2025 and Release 2026 [L-PSR-5, AT-PSPF-1, IR-PSPF-1]. The mailbox the Direction names, PSPF@homeaffairs.gov.au, occurs 4, 5 and 5 times respectively in the same four places in each: the department's contact line, the paragraph on notifying the Chief Security Officer's details, Table 2's method column and the variation-request sentence, none in a requirement paragraph; counted over each whole text and each occurrence read.

5 The word retired

The rule defines retired by its place. A Direction is "incorporated into the following annual PSPF Release (each July) as mandatory requirements and then retired" or "retired outright" [L-PSR-12]: retirement is what follows incorporation, or what happens instead of it. The Guidelines define the word in neither the rule's own section nor their glossary: the glossary, section 26 in each edition, carries no entry for retired, retire or retirement and no entry for a Protective Security Direction, tested by whole-word search over the glossary's 464, 516 and 525 extracted lines; and no release carries a glossary heading, tested over the three releases' extracted text.

The framework applied the word to Direction 001-2023 in terms. The Release 2024 Guidelines, in the sentence that follows the rule: "Direction 001-2023 on the TikTok application has been incorporated into PSPF Release 2024 and has therefore been retired." [L-PSR-9].

It did not apply the word to Direction 001-2024 in any edition. The same edition, in the next sentence: "Directions 001-2024, 002-2024 and 003-2024, along with any future Directions issued prior to July 2025, will be reviewed as part of PSPF Release 2025." [L-PSR-9]. The Release 2025 Guidelines, December 2025: "Directions 001-2024, 002-2024 and 003-2024 have been incorporated into PSPF Release 2025." [L-PSR-11], without the clause "and has therefore been retired" [L-PSR-9] that the same section gave the TikTok Direction. The Release 2026 Guidelines, July 2026, carry the rule and no sentence naming any Direction beneath it [L-PSR-12]. Over the whole extracted text of each edition, the string 001-2024 occurs 1, 3 and 2 times, the two later editions' further occurrences being the two Explanatory Note citations in each, and the word retired occurs 4, 3 and 3 times, none of them in a sentence that names Direction 001-2024; each occurrence was read.

The release's own word for this Direction is integrated. Release 2026, section 1.2.1, is the first of the three releases read to list Directions and the first to say what becomes of them: "Protective Security Directions will be incorporated into the following annual PSPF Release and then retired." and, in its list, "Direction 001-2024: Managing Foreign Ownership, Control or Influence Risks in Technology Assets" "integrated into PSPF Requirement 0046." [IR-PSPF-1]. The Release 2026 Summary of Changes records the change at "Section 1.2.1" as "Added list of Protective Security Directions" [L-PSR-15], the cell continuing to date across the table's second line in extraction. Section 1.2.1 of Release 2024 and of Release 2025, from its heading to the heading of section 1.3, 1,042 characters each after whitespace folding and running-header removal, carries the string retired 0 times and the string 001-2024 0 times [L-PSR-5, AT-PSPF-1]; the same section of Release 2026, 2,331 characters on the same test, carries each once [IR-PSPF-1]. The release then sends the reader to the department's page: "See Protective Security Directions under the PSPF for all Protective Security Directions." [IR-PSPF-1].

The framework uses retired of requirements as well, so the word was available. The Release 2025 Changes Summary, of Requirement 0113: "Retired and replaced by 0214" [L-PSR-4b]. The Release 2026 Summary of Changes, of Requirements 0091 and 0092: "Requirements retired and replaced by PSPF Requirement 0221." [L-PSR-15].

6 What presents the Direction as current

The department's listing carries the Direction with a publication date and no status statement. The page lists "Direction 001-2024" with "Publication date: 8 July 2024" and "PSPF Direction 001-2024 requires Australian Government entities to identify indicators of Foreign Ownership, Control or Influence risk as they relate to procurement and maintenance of technology assets and appropriately manage and report those risks." [IR-PSPF-3], in the present tense. Over the page's whole tag-stripped text, 4,541 characters after whitespace folding, the strings retire, integrat, supersed, current, "in force" and withdrawn occur 0 times, case-insensitive. The page carries nine distinct Direction identifiers, from 001-2023 to 001-2026, each of which

Release 2026 lists as integrated, nine of nine, with no status word beside any.

The Direction's own page is served today unchanged in text since at least 3 December 2025. As served 9 September 2026 it reads "This Direction requires Australian Government entities to identify indicators of Foreign Ownership, Control or Influence risk as they relate to procurement and maintenance of technology assets, and to appropriately manage and report those risks." [L-CCP-12b]. Its tag-stripped text, 1,049 characters after whitespace folding, is identical to the 11 August 2026 render [L-PSPF-2] and to the memento the archive served for the 11 December 2025 request from its 3 December 2025 capture [L-CCP-17], tested by comparing the three extracted texts; the six status strings occur 0 times over those 1,049 characters. The archive's index for the address holds 12 captures from 3 August 2024 to 11 December 2025 with 8 distinct digests, the last a 301, counted from the index rows [L-CCP-15].

Two instruments in force name the Direction in the present tense. The Whole-of-Government Cloud Computing Policy, Version 1, which states "The policy will take effect on 1 July 2026." [L-CCP-4b], names among the frameworks an entity complies with: "The Protective Security Policy Framework, including Direction on Managing Foreign Ownership, Control or Influence Risks in Technology Assets." [L-CCP-4b], and its Policy Requirements page links that phrase to the Direction's publications page [L-CCP-3b]. The Department of Finance's ClauseBank page: "This includes PSPF direction 001-2024 which requires Australian Government entities to identify and appropriately manage FOCI risk as it relates to procurement and maintenance of technology assets." [IR-FIN-1].

No other document held applies the rule to this Direction. That statement was measured over every archived body in this corpus on 10 September 2026: 226 PDFs by extracted text and the nine pinned that day, and every HTML, text, JSON and Markdown body by string search, for "001-2024" and "Direction 001". Twelve bodies name it: the Direction itself in two copies, its page in four captures, the listing, Release 2026, the three editions of the Guidelines, the cloud policy's Policy Requirements page and ClauseBank; this practice's own fifth supplement to a Senate inquiry; and three false hits on Directions 001-2025 and 001-2026. Of the twelve, the three Guidelines editions carry the rule and none applies it to this Direction. The Foreign Ownership, Control or Influence Risk Assessment Guidance, 25 pages, does not name the Direction. The search does not reach GovTEAMS, the PSPF website beyond the pages pinned, or any Home Affairs guidance not held.

7 The finding

Each element below is stated with its own artefact and its own date. Each is what the artefact shows. No sentence here says what they compose into.

One. The PSPF Guidelines state that a Direction is reviewed annually and either incorporated into the following annual release as mandatory requirements and then retired, or retired outright, in a sentence word-identical across the 2024, 2025 and 2026 editions. L-PSR-9, memento of 1 May 2025; L-PSR-11, memento of 8 January 2026; L-PSR-12, as served 10 September 2026.

Two. Requirement 0046 reads the same and is dated the same, 31 October 2024, in Release 2024, Release

2025 and Release 2026, and the release defines that date as the date the requirement was last updated. L-PSR-5, memento of 5 December 2024; AT-PSPF-1, as served 5 August 2026; IR-PSPF-1, as served 31 July 2026.

Three. The Release 2024 List of Requirements records Requirement 0046 as "New (add)" and "N/A new control", and records the two TikTok requirements as descending from "Direction 01/2023"; over its 209 extracted rows, no row cites Direction 001-2024. L-PSR-7, memento of 18 April 2025.

Four. Direction 001-2024 sets four numbered obligations due by June 2025 and carries no commencement, expiry, review or revocation clause, in two pages read in full; Requirement 0046 is dated eight months before that deadline. L-PSPF-1, as served 11 August 2026.

Five. Of the four obligations, Requirement 0046 carries the first's object and not its form; Requirement 0047 and 0046's second limb carry the third in general terms; the second sits in guidance; and the fourth sits in Table 2 of the release and in no requirement. IR-PSPF-1, as served 31 July 2026; L-PSR-12, as served 10 September 2026.

Six. The Table 2 row on reporting foreign ownership, control or influence risks entered the framework at Release 2025: the phrase "identified during the procurement process" occurs 0 times in Release 2024 and once in each of Release 2025 and Release 2026, and the Release 2025 Changes Summary lists the row as a change. L-PSR-5, memento of 5 December 2024; AT-PSPF-1, as served 5 August 2026; IR-PSPF-1, as served 31 July 2026; L-PSR-4b, as served 10 September 2026.

Seven. Release 2026 is the first of the three releases read to list Directions and the first to say that Directions will be incorporated and then retired; section 1.2.1 of Release 2024 and of Release 2025 carries neither the list nor the word retired. IR-PSPF-1, as served 31 July 2026; L-PSR-15, as served 10 September 2026; L-PSR-5, memento of 5 December 2024; AT-PSPF-1, as served 5 August 2026.

Eight. The Release 2024 Guidelines apply the rule to Direction 001-2023 in terms, "has been incorporated into PSPF Release 2024 and has therefore been retired." L-PSR-9, memento of 1 May 2025.

Nine. No edition of the Guidelines applies the rule to Direction 001-2024 in terms: the 2024 edition says it will be reviewed, the 2025 edition says it has been incorporated into Release 2025 without the retirement clause, and the 2026 edition names no Direction beneath the rule; over each edition's whole text, every occurrence of "001-2024" and of "retired" was read and none joins them. L-PSR-9, memento of 1 May 2025; L-PSR-11, memento of 8 January 2026; L-PSR-12, as served 10 September 2026.

Ten. Release 2026's word for this Direction is "integrated into PSPF Requirement 0046", and it directs the reader to the department's listing for all Directions. IR-PSPF-1, as served 31 July 2026.

Eleven. The department's listing carries the Direction, and the eight others, each of which Release 2026 lists as integrated, with a publication date, a present-tense description and no status word, 0 occurrences of six status strings over 4,541 characters. IR-PSPF-3, as served 31 July 2026.

Twelve. The Direction's own page is served with a 5 July 2024 publication date and a present-tense description, unchanged in text across three captures from the 3 December 2025 memento to 9 September 2026,

with 0 occurrences of the six status strings over 1,049 characters. `L-CCP-12b`, as served 9 September 2026; `L-PSPF-2`, as served 11 August 2026; `L-CCP-17`, memento of 3 December 2025; `L-CCP-15`, index as served 9 September 2026.

Thirteen. The Whole-of-Government Cloud Computing Policy and the Department of Finance's Clause-Bank page each name the Direction in the present tense as a thing an entity complies with or that requires something of it. `L-CCP-4b`, `L-CCP-3b`, as served 9 September 2026; `IR-FIN-1`, as served 31 July 2026.

Fourteen. The framework applies the word retired to requirements in its two published change summaries and, in the documents held, never to Direction 001-2024. `L-PSR-4b`, `L-PSR-15`, as served 10 September 2026.

Fifteen. Nothing in this assessment states whether any entity is bound today by Direction 001-2024, by Requirement 0046, by both or by neither, or what the framework intends by integrated or retired beyond the sentences quoted, or what Policy Explanatory Note 001-2024 says.

Limitations

Four documents are read from the Wayback Machine only, each at a stated memento: Release 2024 at its 2024-11 address, its List of Requirements, its Guidelines in the April 2025 edition, and the Release 2025 Guidelines in the December 2025 edition. The publisher refused their live addresses on 10 September 2026 in both forms this practice's retrieval convention provides. The Release 2024 Guidelines are therefore read at the April 2025 edition and not at first publication, and Release 2025's own List of Requirements is not held.

The Direction's page and the department's listing are read as served on the dates logged, the listing on 31 July 2026 and the page on 9 September 2026; either may have changed since.

The Guidelines are read at section 1.2.1.4 for the rule and at section 6.1.3 for the requirement. Whether any other passage of the Guidelines, or any Policy Advisory, applies the rule to this Direction was tested by string search for "001-2024" over each edition's whole text and not by reading every page.

One row of the Release 2024 List of Requirements, row 143, did not match the row pattern in extraction and is outside the count of rows citing a Direction.

The search that establishes no other document applies the rule to this Direction is a search of documents this practice holds, at the width stated in Section 6, and not of the PSPF website, GovTEAMS or any department's guidance beyond the pages pinned.

Policy Explanatory Note 001-2024 is unread and unheld, and the framework names it as its own guidance on this Direction. Every negative above stops at it.

What this assessment is not

It is not a finding that any entity is or is not bound by Direction 001-2024 or by Requirement 0046. The framework has not said so in terms in any document held, and this assessment does not say so for it.

It is not a finding that the framework erred. The rule is the framework's; the record is the framework's; the assessment reports where the record does not answer the rule and stops.

It is not a reading of any document held on GovTEAMS, and not an inference about what such a document says.

It is not a claim about what the framework intends by integrated or retired beyond the sentences quoted, or about whether a requirement dated before a Direction can be that Direction's integration.

It is not advice to any entity on what it must do, report or assess.
